C++ is a programming language in the family of structured programming languages that supports object-oriented programming. It is an extension of C. ObjectARX is used for creating plugins. AutoCAD extension is composed of two parts: ObjectARX class library and AutoLISP. ObjectARX library contains the functions which are used in the AutoCAD extension. AutoLISP is a functional language that enables AutoCAD to interact with objectARX library. The combination of the two allows AutoCAD to interact with other software. Many third-party applications include AutoCAD in their products to add CAD support to them, such as uCAD, Houdini, Alibre, MeCAD, PTC Creo, Revit, 3ds Max, Maya, and Blender. Some of the popular workflows for AutoCAD-based graphics include: Visio-to-AutoCAD: A popular solution for batch conversion of Visio drawings into AutoCAD models. Designer-to-AutoCAD: A popular tool for converting print designs in AutoCAD for licensing and file back-up purposes. AutoCAD to PowerPoint and other Microsoft Office applications: A popular solution for creating presentations and report on AutoCAD and other CAD software. Translate from one CAD program to another: A popular tool for translating AutoCAD drawings and formats to other CAD software. Automated toolpath generation: A popular application in CAD for generating toolpaths for industrial applications.
