System Requirements For Particitoo For Skype:

* The emulator is recommended, it is easy to use. * It supports IE9+. * Note: you can easily run many emulators, but there are limitations with each one. * The emulator is required to function; you can change the screen mode, but it is not recommended. * The data format will be compressed, depending on the rate of compression on the emulator, this may result in a delay in rendering. * It can use more memory, but not too much, more than 2GB. * Note
