Rhino has the ability to export solid geometry to ACIS SAT files. However it cannot import geometry from SAT files. SAT Import for Rhino removes this limitation by giving Rhino the ability to read ACIS SAT files and import the geometry as solid objects in the active Rhino document. SAT Import for Rhino is very easy to use. Simply run the installer. The installer will automatically load the plug-in into Rhino and make the SATImport menu available the next time you run Rhino. Detailed documentation accompanies the software along with a few tutorials to get you started immediately. The 'SATImport' submenu consists of the following commands: · SATImport - Imports a SAT file · SATImportHelp - Displays the SAT Import for Rhino help file · SATImportRegister - Register your copy of SAT Import for Rhino · SATImportAbout - Displays the SAT Import for Rhino about box

@chirchirchoir - why did you ask for SAT Import? And for which formats can you export the object? You can export and import all 3D solid objects in the SAT Import for Rhino. In this case when you export a model to SAT file the action consists in saving the file to the hard disk and to make the "export" command available in the "File > Export" menu. When you import the file back in Rhinoceros it will be as a solid object. The most important things about the project is the license and that you can export from and import to ACIS SAT files. The next things I found are. It has a console and is distributed as a zip file The description says it is for Rhino 3 and Rhino 4 It gives you the ability to export and import 3D solids to SAT files. The license is Microsoft standard and it allows you to reuse the source code for any purpose. You can download the source from here: Thanks for the explanations... I must say that this one is very good! I am a CAD-expert and 3D-modeller at the moment so that SAT-import does have a big advantage. Since the time I started to learn Python, also the project SAT-Import has been a great help for my work. Because I have to do a lot of work with POV-Ray, I use the POV-Ray 3D-modelling software and SATImport is a great
