It is available in a desktop version (AutoCAD LT) and a fully-featured version (AutoCAD R14). Design review: There is a preview feature in AutoCAD which helps the user to easily review the drawing before finalizing it. Map: The map feature of AutoCAD allows you to draw different types of maps. Drafting: AutoCAD allows the user to create a 2D or 3D drawing. AutoCAD primary features Automatic Selection (AutoSelect): This feature enables the user to easily select multiple objects (measurements, drawings) by automatically picking from one selection box to another. User Selection (UserSelect): This feature allows the user to select objects by dragging the mouse, which makes the user's selection faster and easier. Registration: This feature is important for making sure the parts of drawings are aligned correctly. Narrowing and Blocking: This feature helps the user in eliminating unnecessary objects from the drawing. Aligning and Placing: This feature allows the user to drag and drop the object so that the parts of the objects are aligned properly. Editing: This feature is used to edit/modify the design. As such, it is not limited to the world of CAD. AutoCAD 2008 and later versions can be used with Adobe Systems' InDesign program. Features The built-in tools include: Scribble which draws lines, arcs, splines, circles, ellipses, and text. Text that allows text to be displayed in various fonts, styles, and colors. Insert Keys which allows a user to insert a 2D or 3D drawing feature, such as a line, circle, surface, or spline. Insert Shapes which allows a user to insert 2D or 3D shapes, including lines, circles, surfaces, and splines. Intersect which finds the intersection of two 2D or 3D shapes. Plot which allows a user to draw a spline, make an arc or circle, or draw a 2D path. View which shows a 2D or 3D view of the drawing. Annotate which allows a user to label a drawing. Draft and Present which allow a user to save a drawing as a DWG or DXF file. Manipulations Rasterize converts a vector drawing into a bitmap. Geometry converts a 2D path to a 3D feature. "Push/Pull" moves the drawing to new location. Wireframe shows the internal elements of a 2D or 3D model. Repair works in response to the user of an eraser or a knife tool. Mesh creates a repeating 2D pattern. "Insert Aparix" uses an existing drawing to insert a new drawing with a predefined orientation. Copy: Gives the user the option to select a geometry from one drawing to copy it into another. Edit: Allows the user to delete, copy, move, or rotate geometry. Rotate: Allows a user to rotate the object to a different angle. Rasterize: Converts a vector drawing into a bitmap. Geometry: Convert a 2D path into a 3D feature. "Insert Aparix": Uses an existing drawing to insert a new drawing with a predefined orientation. Make: Allows a user to create a new, empty drawing. At the time of activation you should receive an instruction to download the keygen. Insert the keygen into the keygen folder. Run the Autocad-Activation-Tool.exe. Go to the link and click on 'Autocad'. Click on the 'Register' button at the bottom. That's it! You must now verify the activation! To do this, start the "Registration_tool.exe" application from the Autocad-Activation-Tool folder. Click on "Activate/Reset AutoCAD". A window pops up and you can read a message. If you receive "Activation successful" this means that the keygen is working. If you receive "Activation failed" the keygen is not working. In this case you can verify if it was your copy of the keygen or the provided by Autodesk. If the keygen is working but the activation fails then there are several possibilities: - The IP-address of your network is not whitelisted, in that case you can try to change your IP-address in the "Activation_settings.xml" file. - Your IP-address is not allowed by your IT department, in that case you will need to contact your IT department for more information. - Your computer has not been active (logged in) for a long time. You can activate your computer and then try again. First, make a backup of your Autocad_users folder. Then run the "Activation_tool.exe" from the Autocad-Activation-Tool folder.
