It supports a wide variety of file systems (usually there will be an option for FAT, NTFS, etc), various compression formats, and many more - including the many newer formats which are now appearing in use such as Ogg Vorbis, FLAC, and Apple's ALAC. K3b also supports cue, BIN, CUE, DATA, CPL, CDA, and MP3 files. The burning process is complicated and involves setting up a customised CD/DVD volume, which can be made in a number of ways, but K3b allows the user to select one of the common kinds of layout, or can be created from a template. Burning options in K3b are configurable and can be set for CD-R, CD-RW, DVD-R, DVD+R, and DVD-RW media. K3b ships with a large collection of templates and is bundled with a number of other KDE goodies including the K3b configurator (analogous to the nice one in Nero and Roxio), the K3b developer's toolkit (making it possible to create new K3b templates), the Enlightenment window manager, and KDE's K3b configurator. K3b also sports a menu for formatting tasks (eg, the command 'format DVD' will format a DVD folder or ISO image to support a DVD), and various advanced features including conversion of files to a number of popular audio formats and the ability to select specific audio tracks. K3b has a number of advanced options for configuring the burning process, including configuring the start and end points for the burning session. It also includes a job log of all operations, plus preferences and settings for advanced topics such as file and directory creation permissions, and formatting of various filesystems.
