Development and History Autodesk is the world's largest manufacturer and marketer of 3D CAD software. It was founded in 1982 by Murray S. J. Penn in San Rafael, California. The company was founded in his kitchen on the kitchen table. In 1984, Autodesk introduced its first AutoCAD program. Since that time, Autodesk has acquired the brand software for AutoCAD, ACIS, Alias, VectorWorks, and others. Since 2011, Autodesk has been working with the cloud computing service, Appetize, to create a new series of integrated cloud-based products and services for the design and engineering markets. In October 1997, Autodesk acquired the architect and architectural engineering software software PDS (Precision Design Systems). In addition to PDS, Autodesk acquired technical software supplier and distributor ADT Solutions (ADT) in March 2000. In September 2003, Autodesk acquired online CAD services provider and full service provider CADtender (CT). In September 2007, Autodesk acquired the majority stake in award-winning software developer and CAD market leader PreForm Solutions. Since its founding, Autodesk has been headquartered in San Rafael, California. A new Autodesk campus, Autodesk West, was built in the city of Santa Rosa in 2014. Autodesk has since expanded to another campus in San Francisco, California. Autodesk has been conducting research since 1988 into issues and problems that occur in the use of CAD software. It has established these issues and problems as what it calls the Design Science Research Project (DSRP). The DSRP began in the 1980s and continued throughout the 1990s. The DSRP's research in the early 1990s led to the development of the AutoCAD software. In April 1999, Autodesk acquired the technology associated with the 3D Warehouse, an online database of model geometry from a variety of sources, including Autodesk users. A major milestone in the history of AutoCAD was when Autodesk was acquired by the private-equity firm, Bain Capital, in August 2008. History of the CAD Software For decades, designers, draftsmen, and engineers used pen-and-ink drawings or a mechanical drafting board, with a cutting tool such as a compass and/or protractor, or various types of transparencies to create their architectural drawings and blueprints. More recently, the
